HEATING & VENTILATION

AIR CONDITIONING UNITS DUTY SHARE

Sarum air conditioning duty share panels are designed to control two air conditioning units on a duty share basis featuring a high temperature alarm for each system.

The controller has been designed to run for a specified period and then switch duty to the second unit. In situations where the room temperature reaches the first set point of the digital stat, the second unit can be enabled to run, thus allowing both units to operate together.

In instances where the temperature continues to rise to the second set point, the alarm lamp will illuminate and the alarm will sound (mute enabled if required).

The controller has been designed to allow for linking to the building's fire alarm circuit.

In this instance when the alarm is activated, the controller has the ability to shut down specified electrical and electronic systems.

Large range of ancillary equipment and accessories from stock and to order including:

- Airflow and filter pressure switches
- Emergency stop stations
- LPHW valves and actuators
- Damper motors
- PIR sensors
- Room thermostats
- Frost thermostats

Full replacement parts and spares supply

Technical support

12 Month Guarantee* on all products

*Guarantee is conditional and covers replacement or repair of faulty items, excludes site labour costs or user damage.

Features include:

- Change over in fault condition
- All units run when temperature reaches high temperature set point
- Audible alarm for common fault with mute switch
- Alarm test button
- Volt free output for common faults
- Indicators for duty and fault for each unit
- Duty share time adjustable from 5 hours to 10 days
- Fire alarm interlock and indicator lamp on panel door
- Door interlocked isolator

Optional extras:

- Auto dialler for SMS, Voice mail or email ability to send in fault condition
- Duty share capability for multiple units
